III. Master-slave control

Two or more identical lamps are connected by DMX three-core signal line, all lamps are modified to any address code from 001 to 512, any one is set as the host, other lamps are slave, and the display screen of all slave does not flicker; When the host computer is used to adjust the effects of gradual change, pulse change, jump change, sound control and self-walking, all slave computers synchronize the effects of gradual change, pulse change, jump change, sound control and self-walking.

Special note: 1. Only one host can be set for a group of lamps. If there are multiple hosts, all lamps will flash randomly and not be synchronized.

All lamps in the 2、 must function only when the DMX512 console is turned off.

IV. DMX512 control

After the address codes of all lamps are set, connect all lamps to the DMX512 console in parallel with the DMX three-core signal line. The address code stops flashing, indicating that the DMX512 console signal has been sent to the lamps. Use the DMX512 console to control relevant functions according to the channel description.
